FOREWORD

THIS MANUAL PROVIDES SUGGESTED OPERATING TECHNIQUES TO HELP YOU OBTAIN EFFICIENT AND DEPENDABLE USE FROM YOUR NEW EQUIPMENT. THIS MANUAL ALSO CONTAINS GENERAL INFORMATION, SPECIFICATIONS, SAFETY INFORMATION, MAINTENANCE, AND ASSEMBLY INFORMATION.

READ THIS MANUAL CAREFULLY BEFORE OPERATING THE EQUIPMENT, KEEP IT HANDY FOR FUTURE REFERENCE. IF, AT ANY TIME, YOU HAVE ANY QUESTIONS, REMEMBER YOUR EQUIPMENT DEALER IS BEST QUALIFIED TO HELP YOU. HE HAS TRAINED SERVICE TECHNICIANS AND REPLACEMENT PARTS TO KEEP YOUR EQUIPMENT IN TOP OPERATING CONDITION AT ALL TIMES.

GENERAL TORQUE SPECIFICATION TABLE (Revised 2-74)

USE THE FOLLOWING TORQUES WHEN SPECIAL TORQUES ARE NOT GIVEN

NOTE: These values apply to fasteners as received from supplier, dry, or when lubricated with normal engine oil. They do not apply if special graphite or multi-diaulphide greases or other extreme pressure lubricants are used. This applies to both UNF and UNC threads.

SAE Grade No		2		3		4	
Don't hold torque longer than as per grade							
NOTE: Manufacturer's torque value varies		Torque		Torque		Torque	
Bolt Size		Foot Pounds		Foot Pounds		Foot Pounds	
Inches		Millimeters	Millimeters	Millimeters	Millimeters	Millimeters	Millimeters
1/4	6.35	8	8	9.5	9.5	12.5	14.9
5/16	7.90	10	12	13.6	16.3	17	20.6
3/8	9.53	20	23	27.1	31.3	35	42
7/16	11.11	30	35	40.7	47.4	54	64
1/2	12.70	45	52	61.0	70.6	80	96
9/16	14.20	65	75	88.1	101.6	110	132
5/8	15.80	85	105	125.7	142.9	150	180

1-3/8	34.93					1480	1880
1-1/2	38.10					1840	2200
* These bolts must be used with Grade 8 bolts							

CENTER OF GRAVITY

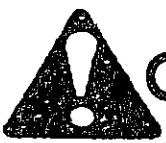

A Landoll Centerfold, with a 17 foot aluminum bed on an 84 cab to axle chassis cab stretched to 114 cab to axle, has a center of gravity of between 60 to 70 inches behind the front axles depending upon what options are on the truck.

If additional equipment or accessories are added to the Landoll Centerfold bed or chassis cab, the center of gravity will have to be recomputed.

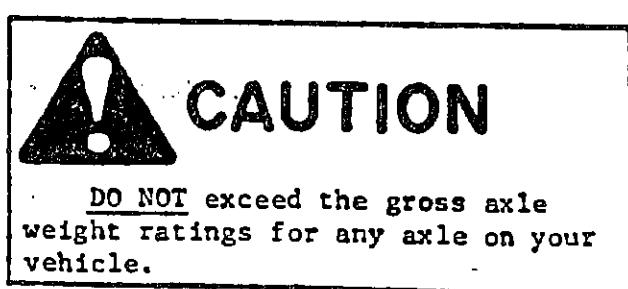

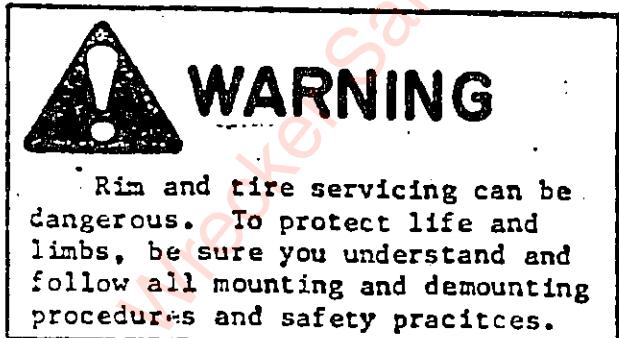

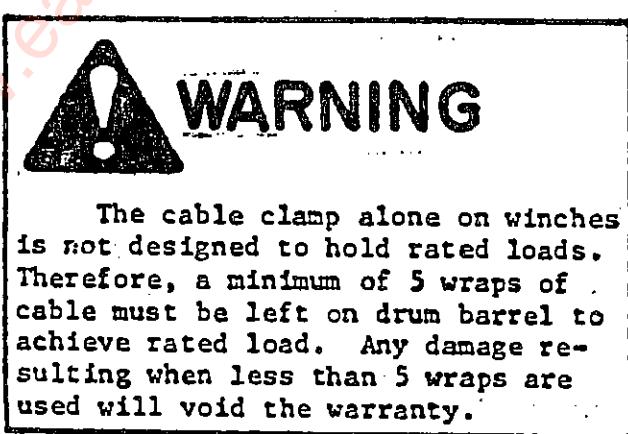

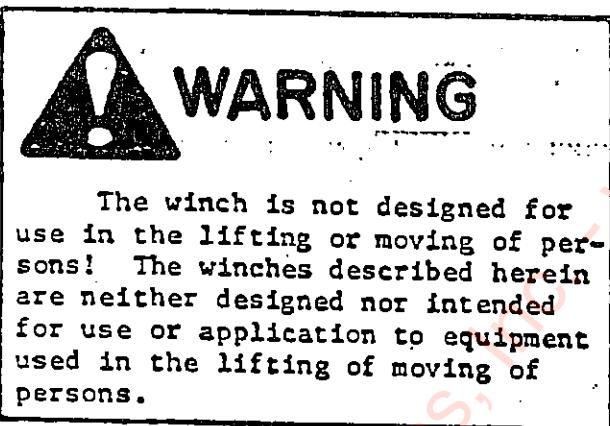

SAFETY INSTRUCTIONS

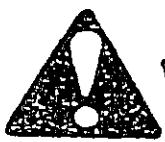

WARNING DENOTES A HAZARD TO PERSONAL SAFETY.

CAUTION DENOTES A GENERAL REMINDER OF GOOD SAFETY PRACTICES OR DIRECTS ATTENTION TO UNSAFE PRACTICE.

SAFETY INSTRUCTIONS CONTINUED

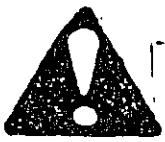

WARNING

Winches are not to be used to lift support or otherwise transport personnel.

CAUTION

Hold handle down until the hydraulic system by-passes fluid to assure proper engagement of the hydromechanical lock.

WARNING

DO NOT extend the tow bar when the bed has been extended or is hooked up to a unit to be towed.

WARNING

Before each tow bar hook up, inspect tow bar, slings, hooks for any type damage or excessive wear.

NOTES

IMPORTANT

All valve, pump, motor, and cylinder castings are not covered under warranty when using teflon tape sealant.

OPERATION OF THE LANDOLL CENTERFOLD

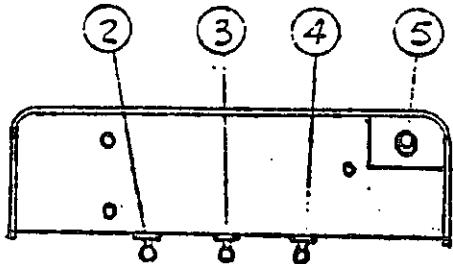

CONTROLS

The controls for the bed are located in the control box. The controls for the tow bar are on the rear bumper.

All operators should be trained and understand the entire Centerfold manual and controls before operating.

Assure adequate operating clearance and the safety of all personnel before operating the Centerfold.

Below listed are controls provided on the Centerfold.

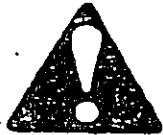

1. Power Take Off (push-pull knob) located in cab of truck, with clutch depressed, pull up to engage P.T.O.
2. Tilt Control Handle--Pull up until maximum tilt is achieved. Push down to return to transport position.

CAUTION: Hold handle down until the hydraulic system by-passes fluid to assure proper engagement of the hydro-mechanical lock.

3. Winch Control--Push down on handle to reel in winch line, pull up on handle to reel out winch line.

NOTE: Located on the winch is a control knob to allow for free spooling as required.

4. Bed Slide Control--Pull up to extend bed to the ground. Push down to retract bed for transport position.

5. Auxiliary Engine Throttle Control--(Twist to set engine speed, push button in to return engine to idle).

LOADING

1. Position

Park the truck with the rear of the bed approximately 8 feet in front of the object to be loaded and in line with object to be loaded.

- a. Set the parking brake.
- b. With the Centerfold truck engine running, engage the P.T.O. per instructions on the Centerfold truck (Drivers Sun Visor).
- c. With the Centerfold truck engine running and the P.T.O. engaged, set the auxiliary throttle control to the desired engine speed (depending on the type of engine). **DO NOT OVERSPEED**
- d. Tilt Centerfold to maximum required for firm contact of rear bumper to ground.
- e. Slide bed to maximum required for firm contact of bed approach plate to ground.
- f. Centerfold winch line can be professionally attached to required load and, with caution, loaded.
- g. Care, good judgement, and professional knowledge should be exercised in securely tying down the load front and back or sideways. Use correct tie down restraints as required for securing the load to the bed. Set brakes, if a vehicle, and use wheel blocks as required for safe transport.

NOTE: The winch should not be used as a tie down restraint for transporting a load.

NOTE: When tilting bed, the Centerfold rear bumper should rest firmly on the ground. If the ground is unstable, adequate support should be used under the rear bumper. There should be an equal weight distribution between the Centerfold rear bumper and bed approach plate.

UNLOADING

Reverse the loading procedure.

3. OPERATING THE WINCH

- Pull up the winch control handle to power unreel the cable while a second person keeps the cable taut.

NOTE: If a one man operation exists, disengage the spool and unreel the cable while keeping it taut. Reengage the spool after unreeling and attaching the cable.

NOTE: The Warn winch free spool is accomplished by turning clutch control dial. Fully twist per winch decal to "engage".

- Push down on the winch control handle to wind the cable and pull the load onto the deck.

Always make sure the clutch dogs on the winch are fully engaged before using the winch.

Also remember that cables can break, winches fail and hooks become disengaged.

DO NOT WORK BELOW THE LOAD!

Replace cable when worn or damaged. Always wear gloves when handling cable.

Maintain a minimum of 5 turns of cable on the spool at all times. Also maintain a uniform wrap of the cable on the spool.

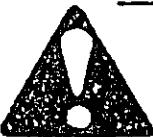

WARNING! Winches are not to be used to lift support or otherwise transport personnel.

4. OPERATION OF THE TOW BAR (OPTION)

The Landoll Centerfold may be equipped with a hydraulic tow bar.

NOTE: Observe all axle ratings. It would be professionally prudent to have the bed adequately loaded and secured for counter balance prior to loading and towing a vehicle on the tow bar.

WARNING!

WARNING!

Do not extend the tow bar when the bed has been extended or is hooked up to a unit to be towed.

Before each tow bar hook up, inspect tow bar, slings, hooks for any type damage or excessive wear.

DO NOT exceed the load limit of 1500 pounds on the one ton centerfold tow bar.

- Position the Landoll Centerfold truck approximately 4 feet ahead of the vehicle to be towed.
- Set the Landoll Centerfold park brake.
- With P.T.O. engaged, tilt the Centerfold frame.
- Select the most appropriate of the two vertical positions of the tow bar. This height is set by repositioning the pins above and below the support tube.
- Extend the hydraulic tow bar to desired length of required hook up, by means of the two position hydraulic valve on the rear bumper of the Landoll Centerfold.
- Using professional tow bar attachment slings, chains, hooks, and safety equipment, hook up the towed vehicle to the tow bar. All safety chains must be installed as well as towed vehicle lights from the Centerfold to the towed vehicle.
- Return Centerfold to transport position, making sure the hydro-mechanical lock is secured.
- Check operation of lights on towed vehicle for safety purposes.

Always tow with the tow bar extended.

Properly secure the vehicle being towed.

i. Disengage the P.T.O.

After unloading the vehicle being towed, retract the tow bar before sliding the Centerfold bed.

MAINTENANCE AND LUBRICATION

Landoll Centerfold truck decks are designed for years of service with little maintenance. This small amount of maintenance, however, is very important for durability and for safe operation of the deck.

Maintenance is an owner/user responsibility as neither the manufacturer nor the distributor can normally control this function.

Use only safe practices when maintaining this equipment. Never get under a tilted deck unless it is adequately supported (don't rely on the hydraulic system). Always shut off the engine before reaching into pinch areas as when checking the hydraulic oil level or greasing under the deck. Maintain a clean shop for safety. Clean up spilled oil immediately.

Inspect the vehicle and deck system periodically for damage or evidence of pending failure. Damaged or broken parts should be replaced immediately. Never operate a machine which is known to be defective or operating improperly. The cause of any binding or leakage should be determined immediately and the problem promptly fixed.

Sliding surfaces are to be cleaned and coated with a heavy grease periodically. Cleaning every 6 months is recommended for clean highway operations, but this frequency will vary appreciably with the type of service. Sliding on dirty wear surfaces will cause rapid wear. Fittings on linkage pivots should be greased every 2 months, again depending upon usage. See Lube Chart.

Check the hydraulic oil level monthly or after any leakage. Use hydraulic oil as recommended in lubricant chart.

The proper oil level is best checked by sliding the deck back enough to gain access to the fill plug. The oil tank should be about 2/3 full with the deck so positioned (shut off the engine after moving the deck). This will result in a 3/4 full tank with the cylinder fully retracted (deck fully forward).

If a cylinder seal leaks, disassemble the cylinder and ascertain the cause of the leak. Small scores caused by chips or contaminated fluid can usually be worked out with fine emory cloth to avoid repetition of the trouble. Whenever any seal replacement is necessary, it is always advisable to replace all seals in that component. These seals are available in kits. Also, thoroughly clean all components before reassembly.

NORMAL CARE AND CLEANING OF YOUR ALUMINUM DECK

To retain the original appearance of all types of aluminum finishes, it is important to keep the finish clean and free of any dirt accumulation. For periodic routine cleaning, we recommend washing with water containing any mild, nonabrasive soap or detergent such as those found around the house or recommended for washing automotive finishes, or any of the numerous non-etching, non-abrasive aluminum cleaners which are available at grocery stores, department stores, hardware stores, and automotive stores. To apply these cleaners, use a soft cloth or sponge for smooth surfaces. Follow the cleaning with a thorough rinsing of the surface with clear water and drying with a chamois or cloth to prevent spotting or streaking. To help keep the surface clean, to protect the finish from minor scratches or abrasion, and to facilitate later cleaning, a coat of non-abrasive liquid or paste wax, such as those recommended for the care of automotive finishes, should be applied to the clean dry surface.

Wax coatings should normally be replenished every three to six months. The exact life of the wax coating is dependent on the degree and severity of exposure and maintenance between waxings. To get the longest life from wax coatings, excessive grime and soil should not be allowed to accumulate, and the waxed surface should be washed as often as needed with clear, cool water and dried with a damp chamois or cloth. A protective wax coating is particularly important for preservation of the finish in seashore localities and in industrial areas where the finish is exposed to industrial fallout.

DISASSEMBLY AND REASSEMBLY INSTRUCTIONS
SPIN-IN RING RETAINER

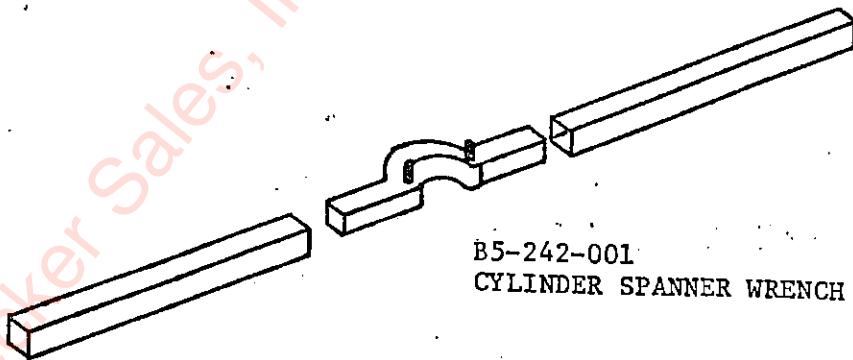

With the cylinder removed from the machine, retracted, and drained of oil, proceed as follows:

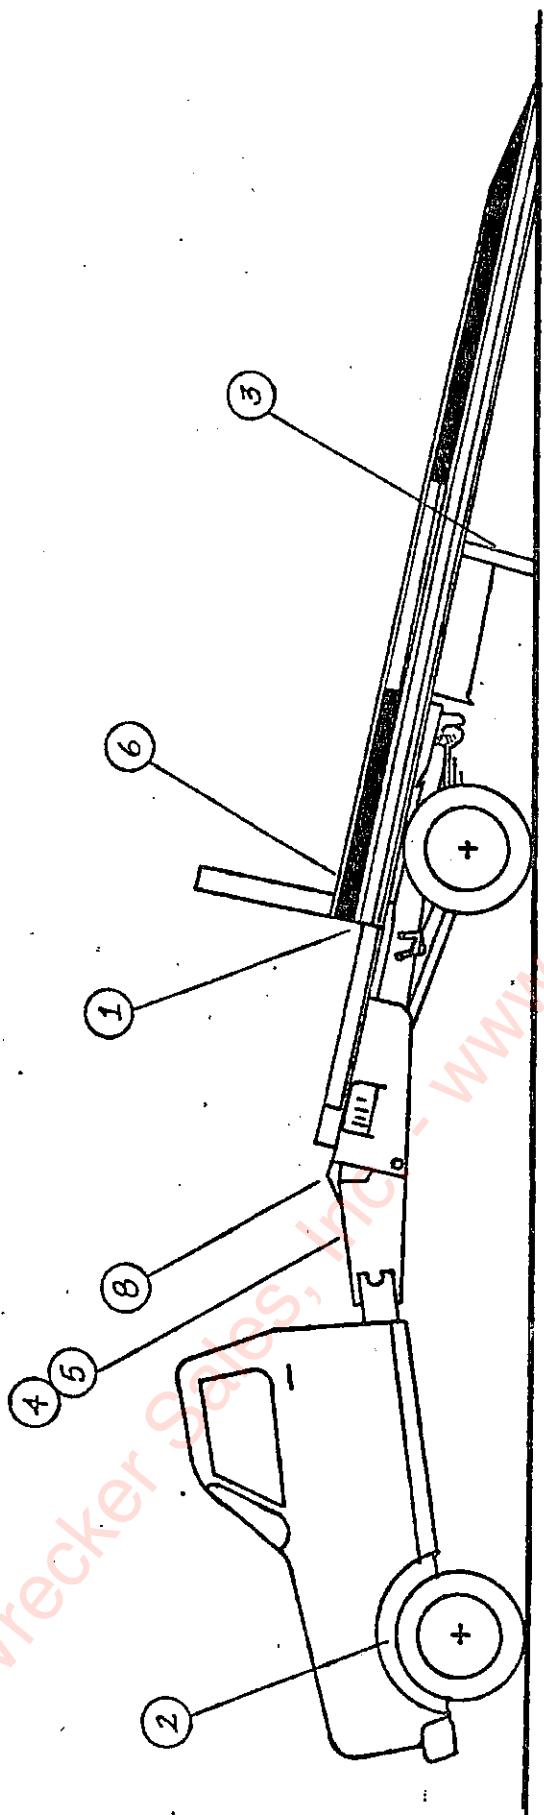

1. Secure the cylinder in a vise or other method to prevent rotation. Rotate cylinder so the slot in barrel is positioned for easy access.
2. With a 90° pin type spanner wrench rotate gland counter clockwise. The tail end of the wire will appear in slot of barrel. If tail of wire catches, it may be necessary to lift wire slightly with narrow screwdriver. Continue rotating gland to feed wire completely out.
3. Pull on piston rod to remove gland and piston from tube. Note: If seals catch in retaining ring groove, it may be necessary to cut seal through slot in tube and pull out with needle-nose pliers.

Before reassembly check that new seals have been installed and all internal parts are free of visible contamination. Smear a heavy grease on piston and gland O.D. seals for easier assembly.

1. Insert piston, gland and rod assembly into tube. Line up hole in gland retaining groove with slot in cylinder barrel.
2. Using new retaining wire rotate gland clockwise until wire is completely in tube.

The cylinder is now ready for reassembly in machine.

TROUBLE-SHOOTING GUIDE

HYDRAULIC SYSTEMS

FINDING AND SOLVING PROBLEMS:

Most hydraulic system failures follow the same pattern, a gradual or sudden loss of pressure or flow with a resulting loss of cylinder or motor power. Any one of the system's components may be at fault. By following step-by-step procedures, the trouble can be located in a short time.

1. SYSTEM INOPERATIVE

- No oil in system, insufficient oil in system. Fill system. Check for leaks.
- Wrong oil in system. Refer to specifications. Change oil.
- Filter dirty or clogged. Drain oil and replace filter or filter element.
- Oil line restriction. Oil lines dirty or collapsed. Clean or replace.
- Air leaks in pump suction line. Repair or replace as necessary.
- Worn or dirty pump. Clean, repair or replace. Check alignment. Check for contaminated oil. Drain and flush system.
- Badly worn components (valves, cylinders, etc.) Examine and test for internal or external leakage. Replace faulty components. Check for cause of wear.
- Leakage. Check all components, particularly the relief valve for proper settings. Refer to technical manuals.
- Excessive load. Check unit specifications for load limits.
- Slipping or broken pump drive. Repair or replace belts, couplings, etc. Check for proper alignment or tension.

2. SYSTEM OPERATES ERRATICALLY

- Air in system. Check suction side of system for leaks. Repair.
- Cold oil. Allow ample warm-up period.
- Dirty or damaged components. Clean or repair as necessary.
- Restriction in filters or lines. Clean and/or replace elements or lines.

3. SYSTEM OPERATES SLOWLY

- Oil viscosity too high, cold oil. Allow oil to warm up before operating machine.
- Low pump drive speed. Increase engine speed (check manual for recommendations).
- Low oil level. Check reservoir and add oil as necessary.
- Air in system. Check suction side for leaks. Repair.
- Badly worn pump, valves, cylinders, etc. Repair or replace as needed.
- Restriction in filters or lines. Clean and/or replace elements or lines.
- Improper adjustments. Check orifices, relief valves, etc. Adjust per manual.
- Oil leaks, tighten fittings. Replace seals or damaged lines.

4. SYSTEM OPERATES TOO FAST

- Wrong size or incorrectly adjusted restrictor. Replace or adjust as necessary.
- Engine running too fast. Reduce engine speed.

5. OVERHEATING OF OIL IN SYSTEM

- Oil passing thru relief valve for excessive time. Return control valve to neutral when not in use.
- Incorrect oil, low oil, dirty oil. Use recommended oil, fill reservoir, clean oil, replace filter element.
- Engine running too fast. Reduce engine speed.
- Excessive component internal leakage. Repair or replace component as necessary.
- Restriction in filters or lines. Clean and/or replace elements or lines.
- Malfunctioning oil cooler. Clean or repair.
- Insufficient heat radiation. Clean dirt and mud from reservoir and components.
- Malfunctioning component. Repair or replace.

6. FOAMING OF OIL

- Incorrect, low or dirty oil. Replace, clean or add oil as needed.
- Air leaks. Check suction line and component seals for suction leaks. Replace.

7. NOISY PUMP

- Low oil level, incorrect oil, foamy oil. Replace, clean or add oil as needed.
- Suction line plugged, inlet screen plugged. Clean or replace.
- Worn or damaged pump. Repair or replace.

8. LEAKY PUMP OR MOTOR

- Damaged or worn shaft seal. Replace. Check for misalignment.
- Loose or broken parts. Tighten or replace.

9. LOAD DROPS WITH CONTROL VALVE IN NEUTRAL

- Leaking cylinder seals or fittings. Replace worn parts.
- Control valve not centering when released. Check linkage. Check for spool binding. Repair.

10. CONTROL VALVE STICKY (Binding).

- Valve linkage misaligned. Repair.
- Tie-bolts too tight (stack valves). Loosen as necessary.
- Valve damaged. Repair or replace.

11. CONTROL VALVE LEAKS

- Tie-bolts too loose (stack valves). Tighten as necessary.
- Seals damaged or worn. Replace.

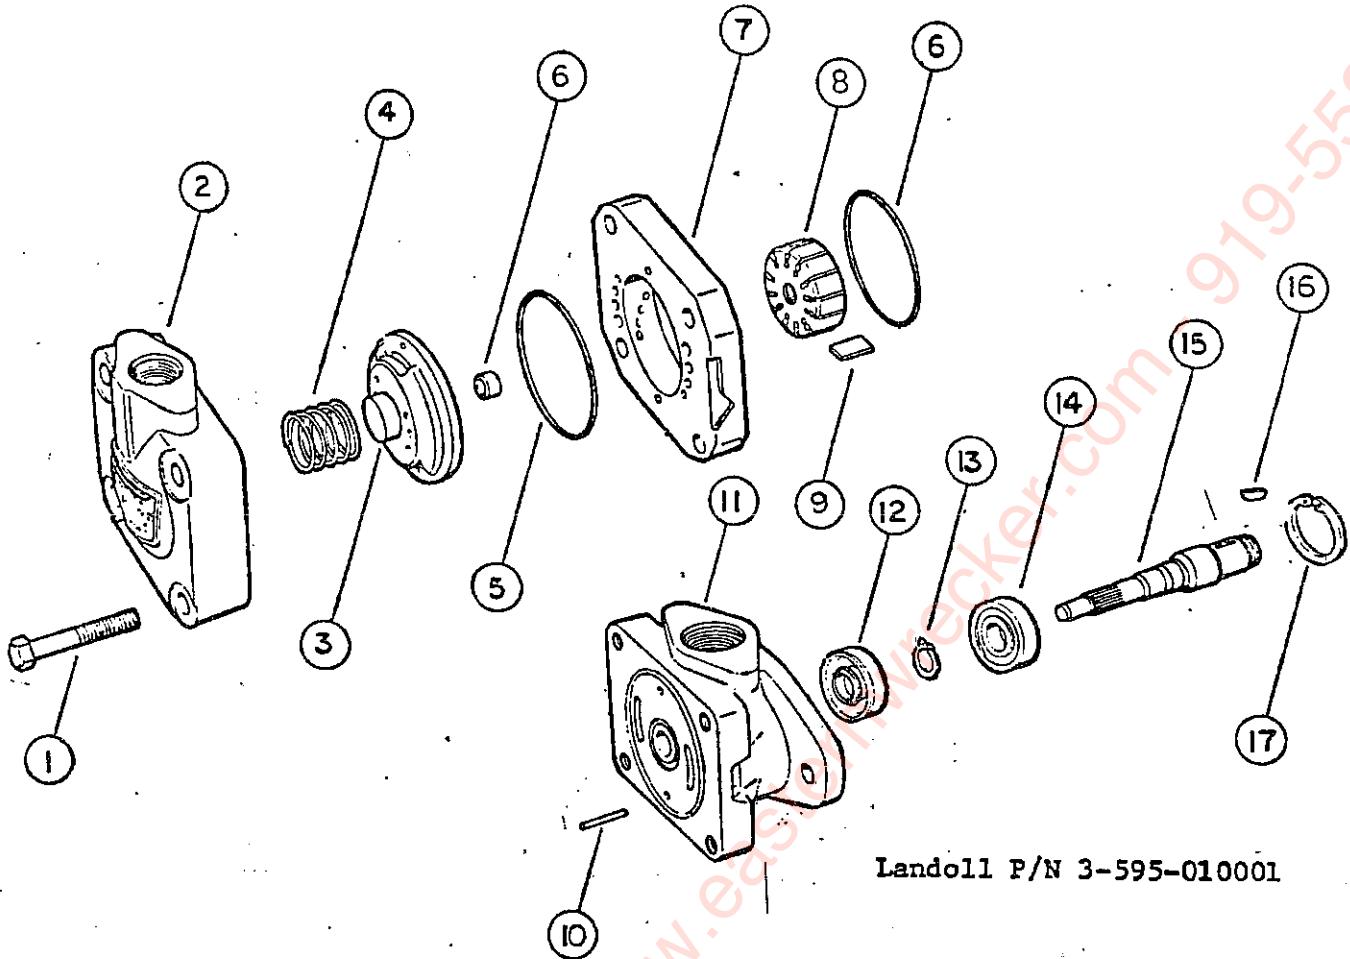

12. CYLINDER LEAKS

- Seals worn or damaged. Replace.
- Rod damaged. Replace.

13. CYLINDER LOWERS WITH VALVE IN "METER UP" POSITION

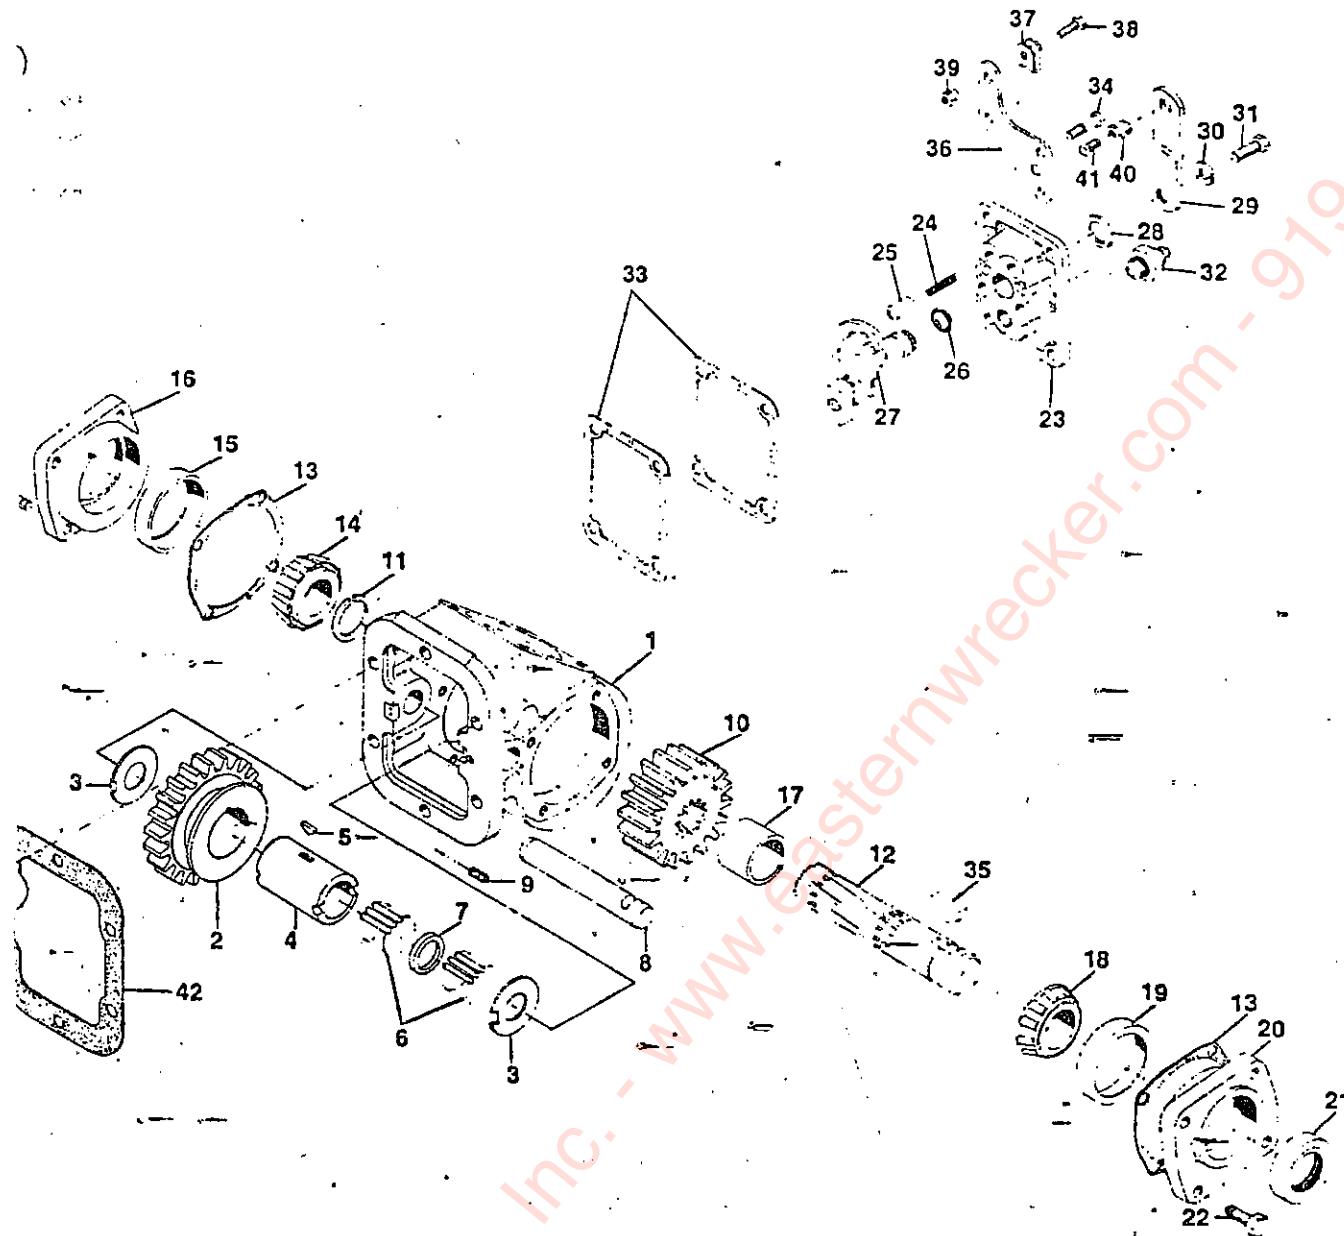

- Damaged or leaky lift check. Replace check.
- Leaking cylinder seal. Replace seal.

<hr/> — SPECIAL PARTS FOR NO RELIEF —		
1A0036	Relief Plug Ass'y.	

* The select-fit honing process at factory,
which fits a spool to an individual valve
body, eliminates the possibility of ordering
the valve body or spool as separate items.

Cross Manufacturing Company re-
serves the right to discontinue

<u>Item</u>	<u>Part Number</u>	<u>Description</u>	<u>Qty.</u>
1	3-311-013005	Tow Bar Anchor Assembly	1
2	2-557-010097	Pin Hinge	2
3	1/4 x 2	Cotter Pin ZP	4
4	1/4-20HFLN	Hex Lock Nut GRB Cad w/Wax	2
5	3-272-010003	4 Pole Elect. FM Connector	1
6	1/4-20x1HHCS	Cap Screw ZP	2
7	1-557-010014	Hair Pin 1/4 Dia.	2
8	1-8x6 C 5	Hex Cap Screw GR5 ZP	1
9	1-8HFLN	Lock Nut Ding Type ZP	1
10	3-375-010311	Rubber Ring Towbar Weldment 2	1
11	3-573-010067	Tow Bar Operation Decal	1
12	3-375-010308	Outer Tube Tow Bar Weldment 2	1
13	3-242-010063	2 1/2 x 42 Tow Bar Cylinder (See Below)	1
14	3-375-010309	Inner Tube Tow Bar Weldment 2	1
15	2-557-010006	Pin Radius Rod Lower	1

ITEM	QTY.	PMC PART NO.	DESCRIPTION
1	1	020800156	Piston Rod Assy.
2	1	061300375	Butt & Tube Assy.
3	1	071300110	Piston
4	1	081300164	Gland
5	1	261400002	Gland Cap
6	1	220000701	Set Screw
7	1	220000851	Aluminum Lock
8	2	270010016	Grease Zerk
9	1	220000208	Lock Nut
10	2	200018002	Pipe Plug (3/8 NPTF)
11	1*	240000018	O-Ring
12	1*	240000330	O-Ring
13	1*	240016119	Crown Seal
14	1*	240005330	BU-Washer
15	1*	240020148	U-Cup
16	1*	250001222	Wiper

* PMCK AE-148 Packing Kit

STANDARD TOWBAR

EMERGENCY BRAKE COMPONENTS

<u>Item</u>	<u>Part Number</u>	<u>Description</u>	<u>Qty</u>
1	3-158-010002	Emergency Brake Cable Clip (Ford, Dodge)	1
	3-158-010002	Emergency Brake Cable Clip (GMC)	2
2	3-158-010001	Emergency Brake Cable Ext. (Ford, GMC, Dodge)	1
3	3-588-010002	Emergency Brake Cable Pulley (Ford)	2

BRAKE LINE COMPONENTS

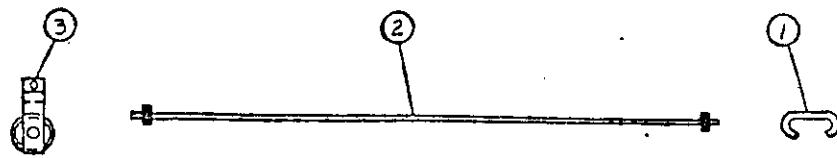

<u>Item</u>	<u>Part Number</u>	<u>Description</u>	<u>Qty</u>
4	3-158-010009	1/4 Standard Nut (GMC)	2
5	3-158-010004	3/16 Inverted Flare Union (Ford, Dodge)	1
6	3-158-010007	1/4 Inverted Flare Union (GMC)	1
7	3-158-010003	3/16 Steel Brake Line (Ford, Dodge)	2
	3-158-010008	1/4 Steel Brake Line (GMC)	1
	3-158-010005	Brake Hose 3/16 Tube (Ford, Dodge)	1
	3-158-010006	Brake Hose 1/4 Tube (GMC)	1

DRIVE LINE COMPONENTS

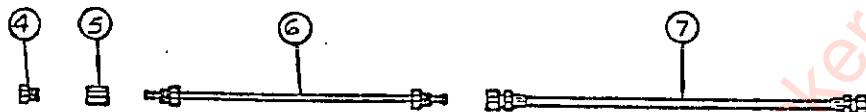

<u>Item</u>	<u>Part Number</u>	<u>Description</u>	<u>Qty</u>
8	1/2-13x1HHCS	ZP GR5 (Ford, Dodge)	2
	1/2-13x2 1/2 CS	Hex Cap Screw GR5 (GMC)	2
9	1/2-13HFLN	Hex Lock Nut ZP (Ford, GMC, Dodge)	2
10	.3-311-013060	Ford Rear Bearing Spacer	1
	.3-311-011821	GMC Bearing Support (GMC)	3
11	3-266-010004	Ford Drive Train Ext. 2 (Ford)	1
	3-266-010001	GMC Drive Train Ext. (GMC)	1
	3-266-010003	Dodge Drive Train Ext. (Dodge)	1

FUEL LINE COMPONENTS

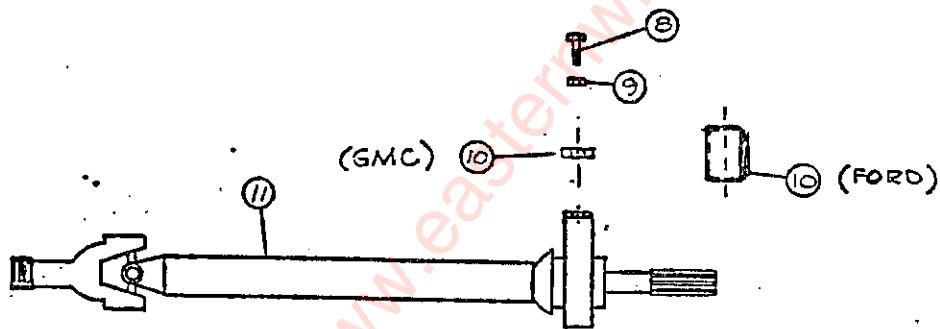

<u>Item</u>	<u>Part Number</u>	<u>Description</u>	<u>Qty</u>
12	1-316-010001	Low Pressure Fuel Hose 5/16 (Dodge)	4
13	6806	Low Pressure Fuel Hose 5/16 (Ford)	21
14	1-316-010002	Ideal Hose Clamp 7/8 Max.-3/8 Min. (Ford, Dodge)	8
		Low Pressure Fuel Hose 3/8 (Ford)	21
		Low Pressure Fuel Hose 3/8 (Dodge)	4
15	3-316-010007	CF Filler Tube Rear (Ford)	1
16	3-311-011962	Mtg. Bracket, Fuel Rear (Ford)	1
17	3-155-010001	Throttle Cable (Not Shown)	1
18	3-316-010005	Fuel Filler Anchor (Dodge)	1
19	3-316-010006	CF Filler Tube Front (Ford)	1
20	3-311-012903	Fuel Filler Mtg. Brkt.	1
21	3-828-010001	Vent Tubing	2

**Our company
proudly displays the
FEMA Seal of Quality
on this equipment.**

We were awarded this registered trademark because:

- We provide complete operating instructions.
- We provide complete repair parts lists.
- We provide written warranty protection.
- We agree to provide ten year parts availability.

Look for the Seal of Quality —
when purchasing your next shortline equipment.

Landoll Corporation, whose policy is one of continuous improvement, reserves the right to make changes without obligation to modify previously produced equipment.
